

Who uses GeoKatalog 2 ?

GeoKatalog 2 is indispensable for geoscientific institutions, universities, libraries, map shops, engineers and industry.

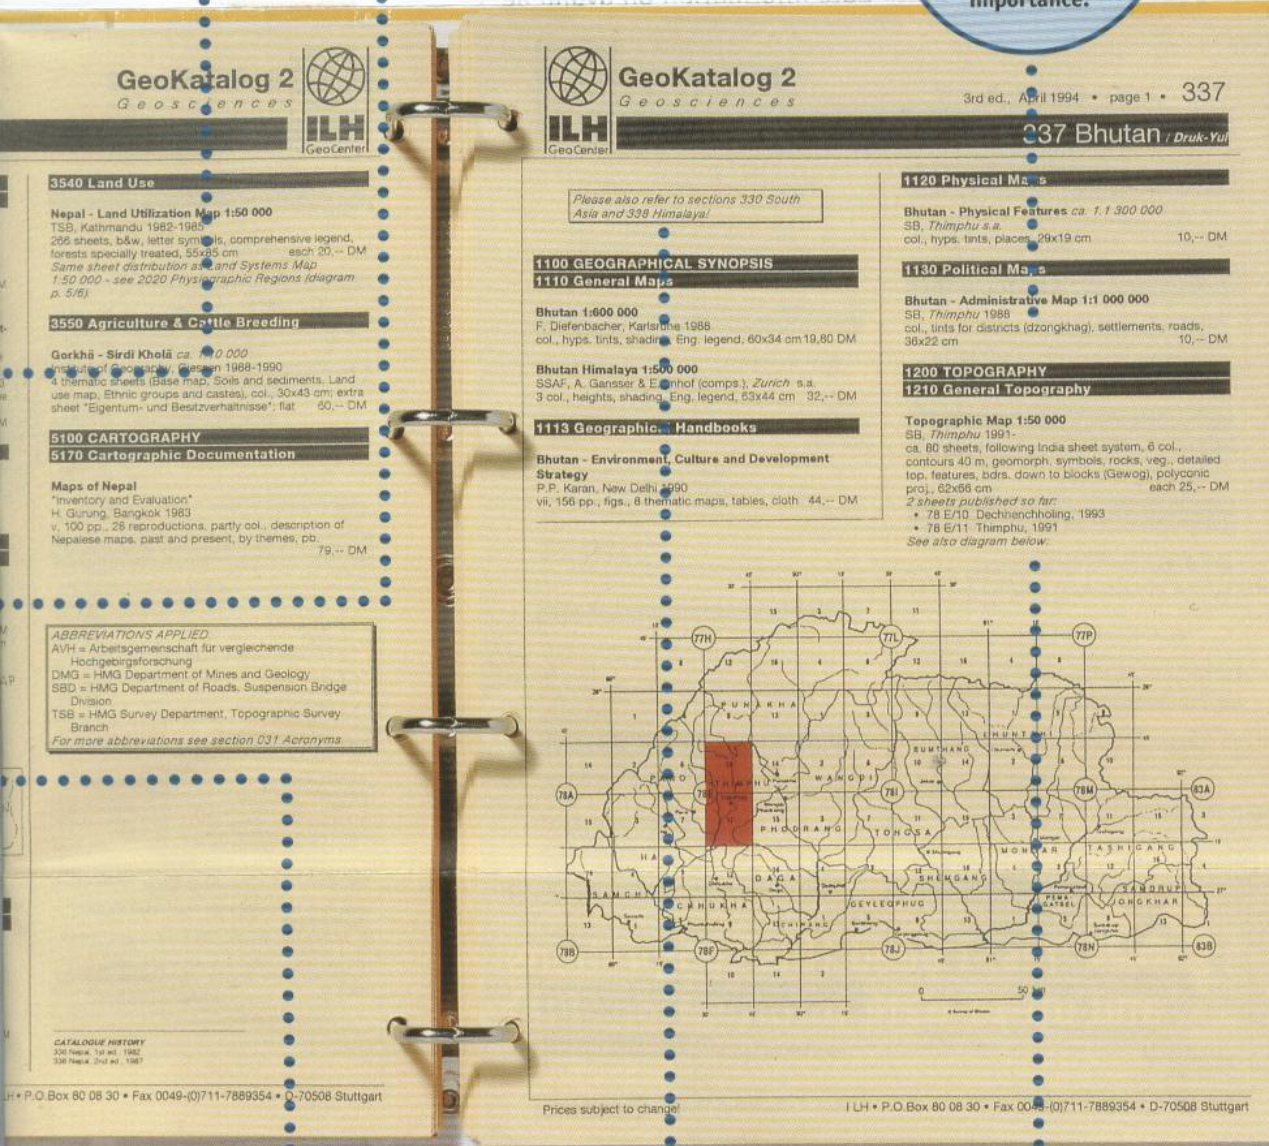

Author or editor, place and date of publication, and serial titles always are given.

All titles are given in their original spelling, even in non-Latin scripts.

Each item is characterized by a short/extensive bibliographical description, correlated to the publication's importance.

What about GeoKatalog 1 ?

While GeoKatalog 2 contains the scientific mapping of the world, its companion volume lists tourist publications, such as road maps, tourist maps, guides etc. GeoKatalog 1 is in German, with the emphasis on German publications.

We often even produce our own sheet diagram where none, or none satisfactory, is to be had from the publisher.

Numerous cross-references facilitate orientation.

All important map series have sheet diagrams showing distribution of sheets, numbers and names, and state of available sheets.
